M-A robotics team makes it to nationals

For the first time in four years of building competitive robots, the robotics team of 25 students from Menlo-Atherton High School went to the national championship, held April 21 to 23 in Atlanta this year.

In Atlanta, M-A and its partners -- two schools from Michigan -- won their 85-team division and made it as far as the semi-finals.

They took first place in the Sacramento regional contest in March. At the San Jose regional later that month, the M-A team won a General Motors Industrial Design award.
